

SKYpower
Power to the people

SKYpower is one of the most technologically advanced aircraft in-seat power and cabin power management systems available on the market today. The product is designed to guarantee airline passengers sufficient power to use their personal electronic devices, including laptops, smartphones and tablets, while in flight.

Outreach your customers expectations

SKYpower offers the flexibility to work with the latest cabin and consumer technologies and can be accessed via USB and 110 volts AC. The system's scalable, modular architecture and functionality mean it is fully adaptable to customer requirements. The system is designed and manufactured by KID-Systeme, which constantly examines and anticipates new market trends and developments to ensure a long and dependable service life for its products.

Pioneer in the power market

Over 400,000 seats on the world's most renowned airlines are equipped with SKYpower, or components from the SKYpower family, making KID-Systeme a global market leader. SKYpower features on aircraft from leading aircraft manufacturers including Airbus and Boeing. Unique patented safety features and state-of-the-art technology distinguish SKYpower in the market and ensure reliability. SKYpower was launched in 1999, when it revolutionised the in-flight passenger experience. The product blends seamlessly into existing cabin designs, allowing for easy installation and integration.

SKYpower

SKYpower classic

The classic SKYpower package is the most popular and widely-used. It provides an interface suitable for every 110-volt power plug design. Personal electronic devices, such as laptops or tablets, can easily be recharged during flight, saving passengers time and hassle.

SKYpower USB

This solution provides an interface suitable for every plug with a USB interface. SKYpower USB operates with high power efficiency and is a lighter SKYpower option, passing on cost-savings to the airline.

SKYpower BIZ Jet

The SKYpower bizJet package is designed for corporate aircraft and provides AC- and USB-power solutions. This modular package is highly adaptable, enabling it to work with any interior specification or configuration

SKYpower combined

The SKYpower combined package is available to passenger airlines wanting to offer AC- and USB-power. The combination allows for fast and simultaneous recharging of multiple devices.

A short overview about SKYpower

Scalable, modular architecture and functionality adaptable to customer needs

Access via USB and 110 volts AC

Guarantees sufficient power to use own personal devices such as laptops, tablets and smartphones

Unique patented safety features and state-of-the-art technology

SKYpower services

Dedicated SKYpower services staff are available 24/7 to assist with any queries or issues quickly and efficiently. SKYpower services is supported by a worldwide network of repair locations.

In perfect harmony

The SKYpower product range can be complemented by selecting the respective solutions from SKYfi, KID-Systeme's wireless content distribution entertainment option. SKYpower and SKYfi are multi-fleet products and can be installed by supplemental type certificate (STC) on all major commercial aircraft.
